

Deploy com Netlify

Esse é um pequeno passo a passo feito para te guiar no momento de Deploy do FrontEnd de seu Blog Pessoal, e que também te ajudará ao realizar o mesmo processo no Projeto Integrador.

Configurando o Projeto

- Seu projeto deve estar atualizado na **Branch Main**;
- A estrutura do seu projeto deve estar seguindo a imagem abaixo:

- Apague os arquivos **Yarn.lock** e **Package-lock.json**;
 - **Atenção:** Apague o Package-lock.json e **NÃO** Package.json;
- No arquivo **Package.json**, substitua o campo **build** pelo seguinte código:

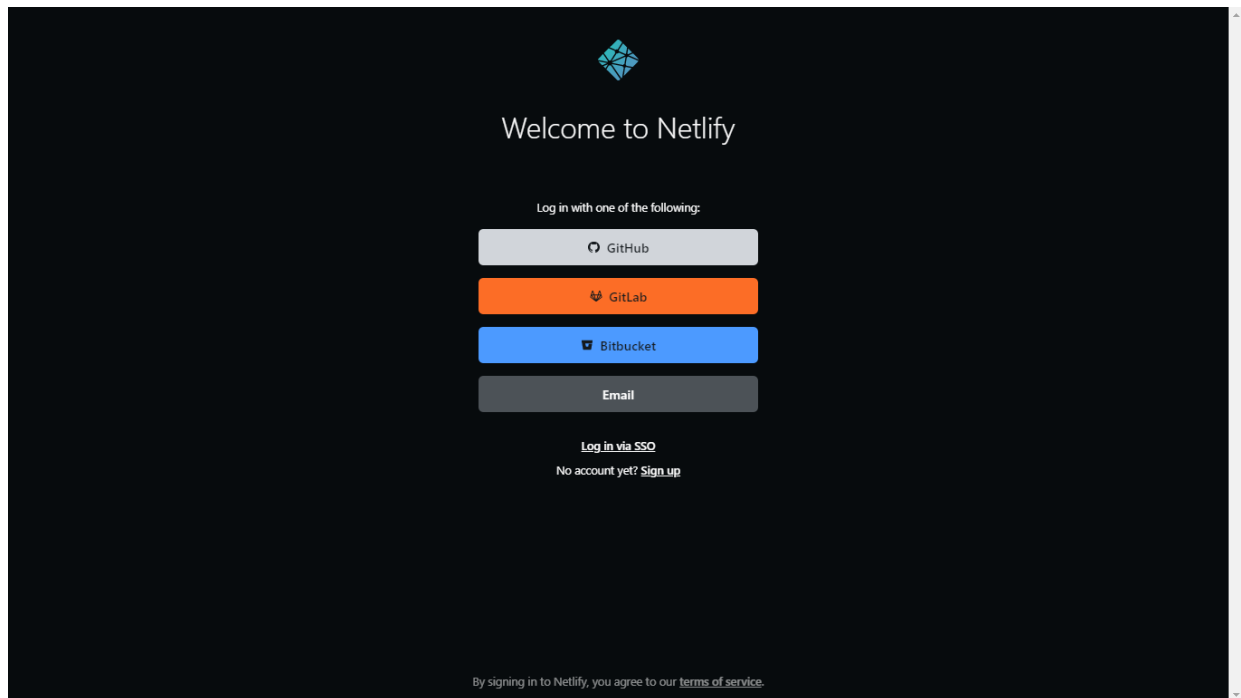

```
"scripts": {  
  "start": "react-scripts start",  
  "build": "CI=false && react-scripts build",  
  "test": "react-scripts test",  
  "eject": "react-scripts eject"  
}
```

Devido a formatação você precisará digitar a linha do comando e **NÃO** copiar e colar.

Feito isso, podemos ir para a segunda parte do Deploy, criar nossa conta na Netlify.

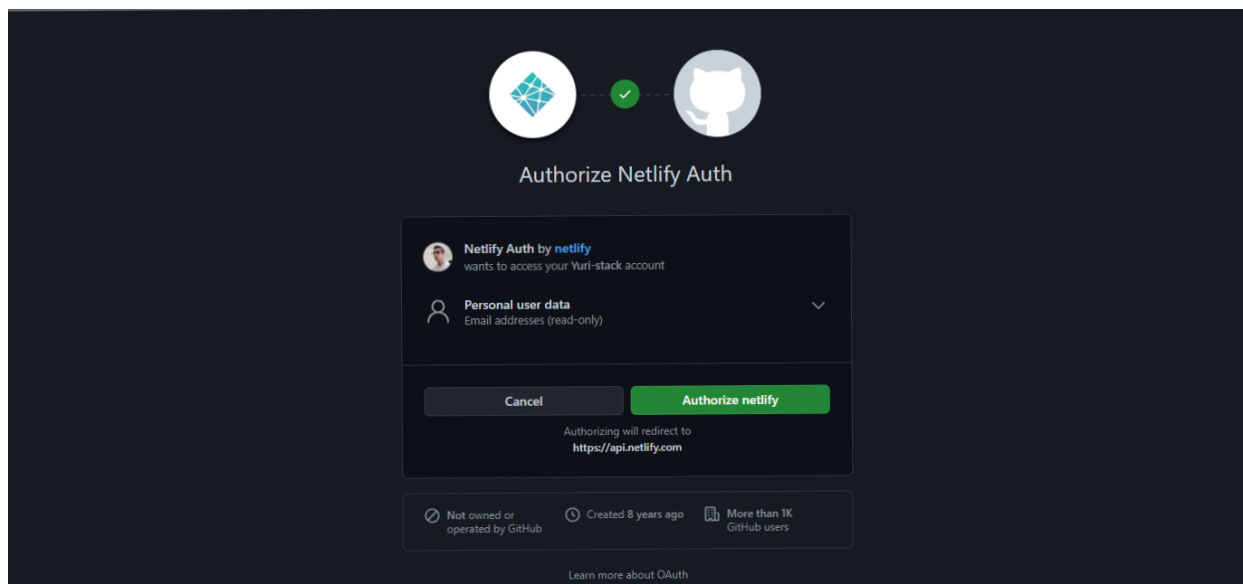

Configurando o Deploy

Acesse o Site do Netlify:

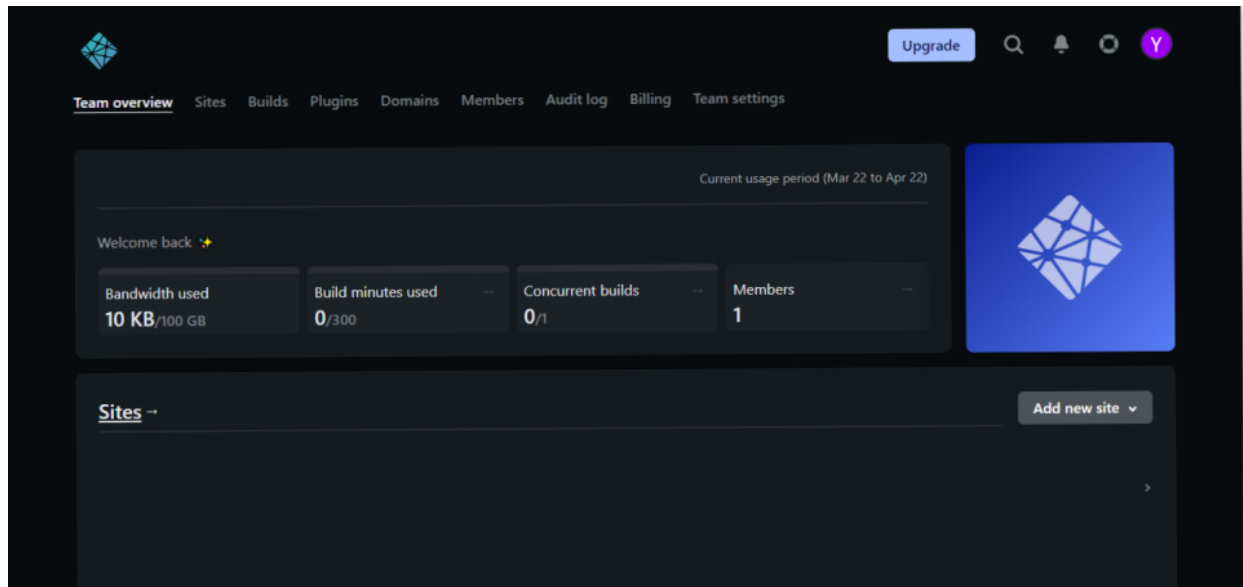

Link: [Netlify](https://netlify.com)

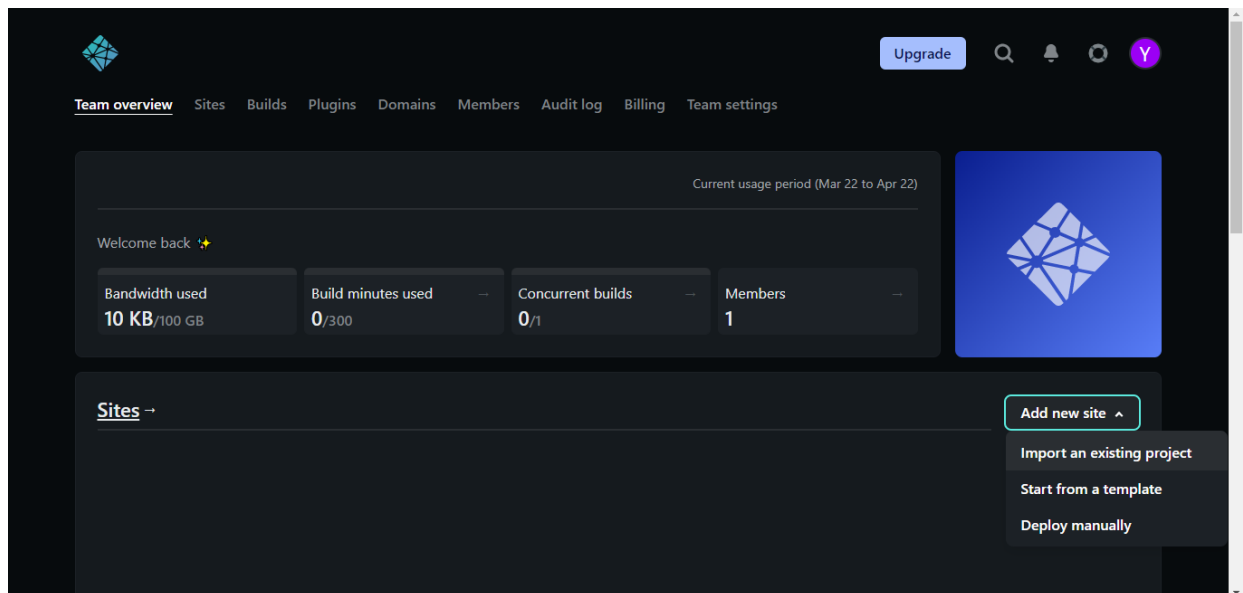

Crie uma conta na Netlify com o Github:

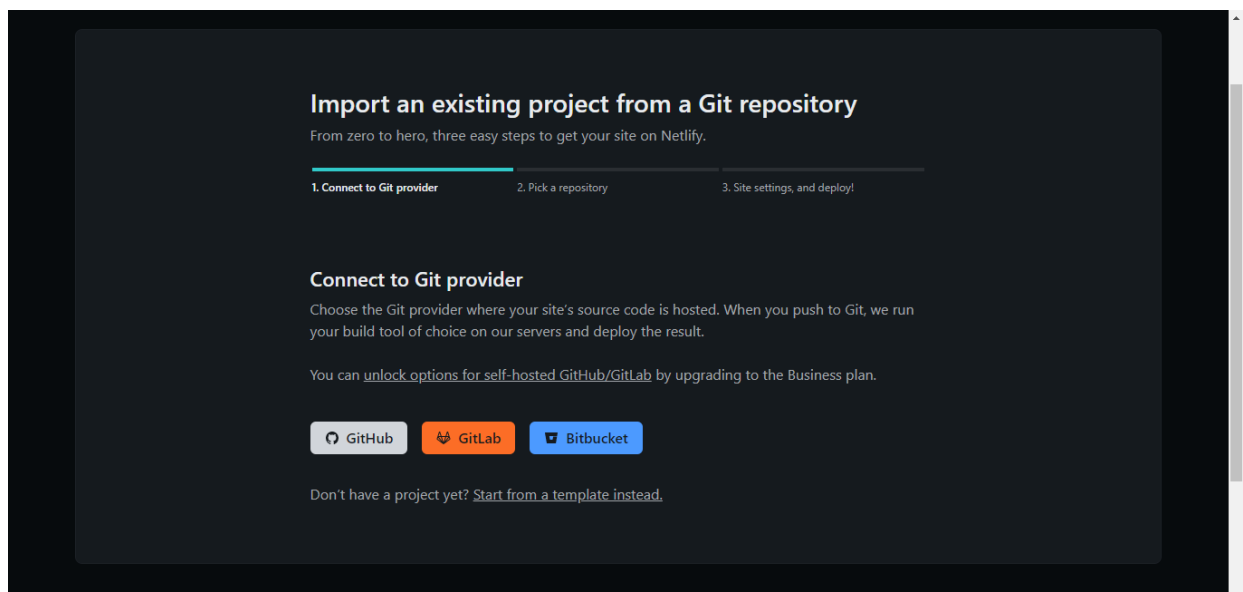

Você verá essa tela:

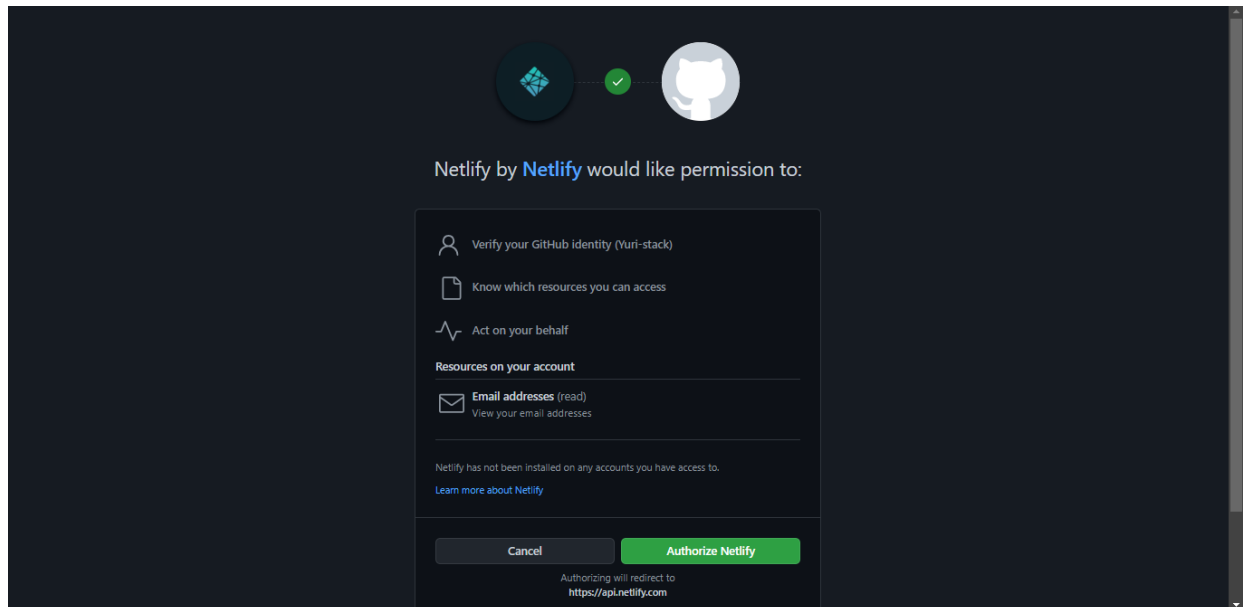

Clique em Add new Site e depois Import an existing project:

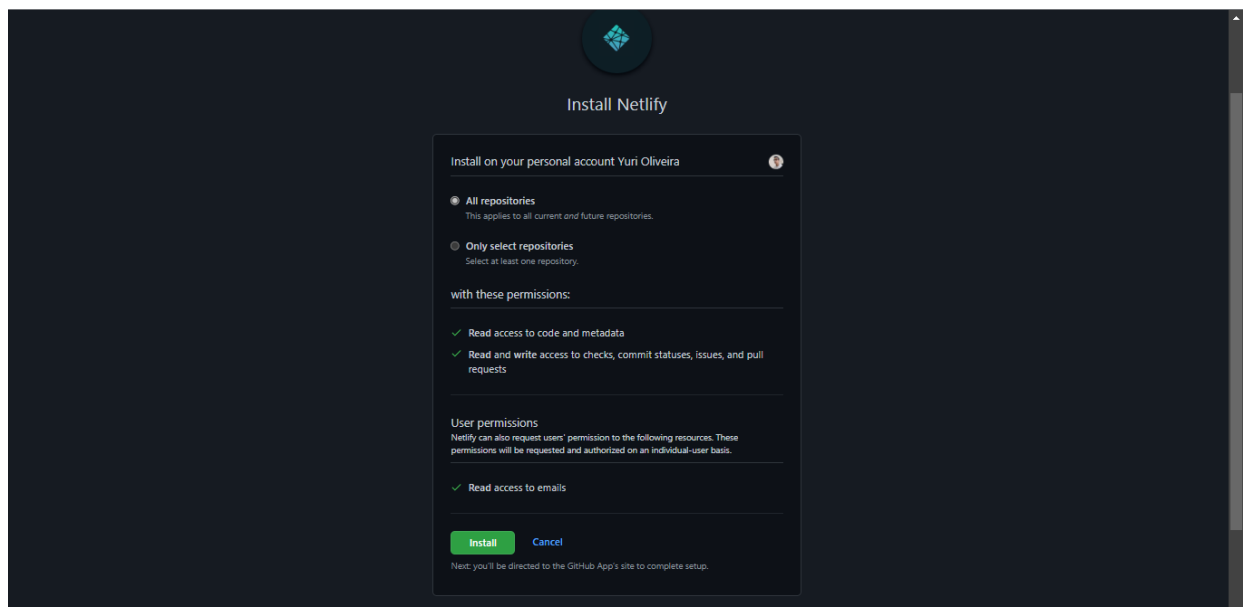

Nessa tela escolha Github:

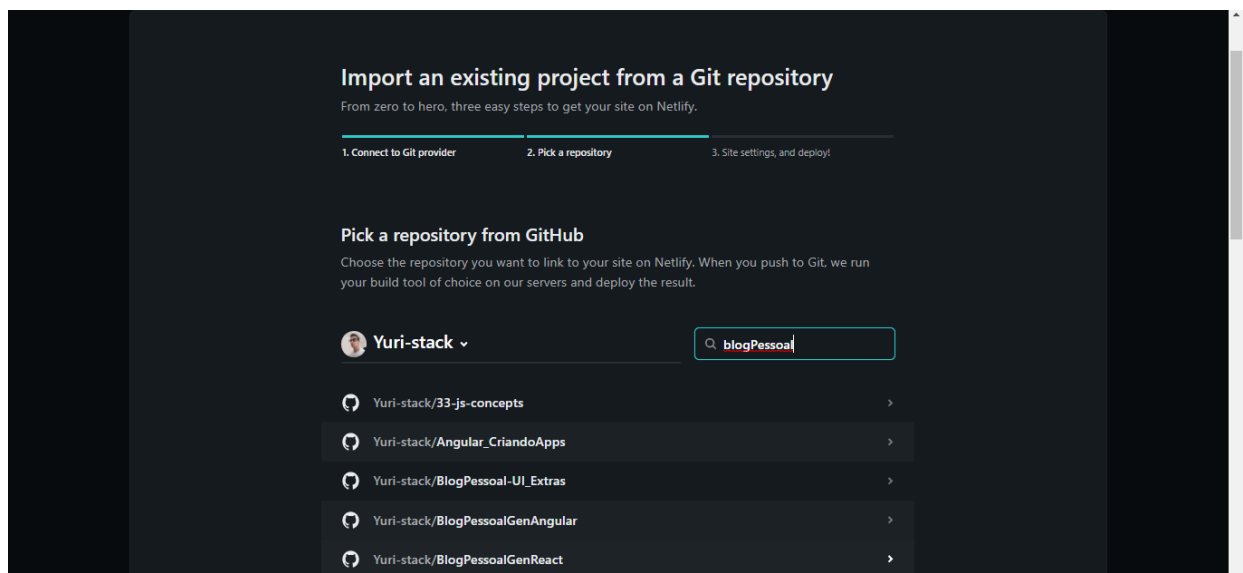

Permita a integração da Netlify com o Github:

Permita que a Netlify tenha acesso a todos os repositórios:

Escolha o seu Blog Pessoal e o importe:

No final dessa tela clique em Deploy:

The screenshot shows the 'Basic build settings' section of the Netlify interface. It includes a dropdown for 'Owner', a dropdown for 'Branch to deploy' set to 'main', and a section for 'Basic build settings'. Below this, there are input fields for 'Base directory', 'Build command' (set to 'npm run build'), and 'Publish directory' (set to 'build'). Each field has an information icon. A 'Show advanced' button is located below the input fields. At the bottom, there is a green 'Deploying...' button.

Aguarde o Deploy finalizar e clique no link em Azul:

The screenshot shows the 'Site overview' page in Netlify. At the top, there is a navigation bar with links to 'Deploys', 'Plugins', 'Functions', 'Identity', 'Forms', 'Large Media', 'Split Testing', 'Analytics', 'Graph', and 'Site settings'. The main content area displays the site name 'admirable-tartufo-0b1afa' and a link to 'https://admirable-tartufo-0b1afa.netlify.app'. Below this, it says 'Deploys from GitHub. Last published at 2:13 PM.' and provides buttons for 'Site settings' and 'Domain settings'. A 'Getting started' section follows, with three numbered steps: 1. 'Your site is deployed ✓' (Try a test build and deploy, directly from your Git repository or a folder.), 2. 'Set up a custom domain →' (Buy a new domain or setup a domain you already own.), and 3. 'Secure your site with HTTPS' (Your site is secured automatically with a Let's Encrypt certificate.).

Observação: A URL é criada com nome aleatório

Ao clicar no Link você é redirecionado ao seu site
